Why Choose Merit Pharmaceutical?

The needle size suggestions are compiled based on common practices shared by various licensed aesthetic injectors. Merit Pharmaceutical does not claim that any specific needle size is required, recommended, or suitable for any particular treatment, patient, or injectable product. Needle selection should always be determined by the licensed healthcare professional based on their clinical judgment, the specific product instructions (e.g., from the manufacturer), patient factors, and best practices in aesthetic medicine. This information for educational and reference purposes only and is not responsible for clinical outcomes, patient results, or any adverse events. Always consult product labeling, professional training guidelines, and applicable regulations before use.
